

Desert Nevada Monarch Waystations and Butterfly Gardens

Whether you have a small garden in the city or acres in nearby surrounding areas, you can draw butterflies to your yard to enjoy. While the low desert in Nevada creates unique challenges, you can still enjoy the ephemeral beauty of these graceful visitors. In a world of vanishing habitats, butterflies will throng to your yard, city park or nature area if you provide four basic requirements: nectar plants, host plants, a tree or large shrub for protection from the heat of the day or to spend the night and an occasional water source for “puddling.”

Host Plants

Host plants, also called larval plants, are annuals or perennials where butterflies lay their eggs. As the tiny caterpillars hatch from the eggs they will consume the leaves and often the flowers as food. While hungry caterpillars can quickly defoliate a plant, new leaves quickly grow afterwards. You can enjoy watching the entire life span of butterflies in your yard by including host plants. Plus more butterflies will often linger in your yard looking for a mate or to find just the right place to lay their eggs. To qualify as a registered Monarch Waystation through Monarch Watch, plant at least ten milkweeds (*Asclepias spp.*) and include other host plants and nectar plants to draw a variety of other butterflies to your garden. We always recommend native plants when available.

MILKWEEDS – MONARCH AND QUEEN BUTTERFLIES			
Host Plant	Botanical Name	Native?	Growing Needs
Desert (Rush) Milkweed	<i>Asclepias subulata</i>	Yes	Full sun, low water
Desert Milkweed	<i>Asclepias erosa</i>	Yes	Full sun, low water. Dies back in winter.
Antelope Milkweed	<i>Asclepias asperula</i>	Yes	Full sun, low water. Dies back in winter.
Arizona Milkweed	<i>Asclepias angustifolia</i>	No – but native to Arizona	Morning sun only, grows well in shade.

SAMPLE OF HOST PLANTS – START WITH A FEW FAVORITES, THEN ADD MORE EACH YEAR. *

Butterfly	Host Plant
Dainty Sulphur	Dogweed, Marigolds
Cloudless Sulphur	Senna
Sleepy Orange	Senna
Black Swallowtail	Dill, Rue, Parsley
Pipevine Swallowtail	Pipevine
Variegated Fritillary	Passion Vine, violets
Skippers	Grasses
American Snout	Hackberry
Texan Crescent	Ruellia
Bordered Patch	Sunflowers
West Coast Lady	Mallows, Hollyhocks
Painted Lady	Hollyhocks, Thistles

Nectar Plants

All butterflies need nectar to sustain their adult life but not all flowers are created equal. Butterflies have favorites and they can vary by the season. They visit the desert in the spring, but late summer and fall are the premier seasons. For a wide variety of visitors, make sure there are flowering plants in your garden throughout the entire butterfly season. Clusters of several plants are most effective and visible to flying butterflies. Here is a sample of some nectar favorites.

Common Name	Botanical Name
Sunflowers	<i>Helianthus annuus</i> * 🌻
Lantana	<i>Lantana camara</i>
Sweet Bush	<i>Bebbia juncea</i> *
Zinnias	<i>Zinnia spp.</i>
Cosmos	<i>Cosmos spp.</i> 🌻
Butterfly Bush	<i>Buddleja davidii</i>
Verbena	<i>Verbena spp.</i> *
Asters	<i>Aster spp.</i> *
Mexican Sunflowers	<i>Tithonia rotundifolia</i> 🌻
Desert Broom	<i>Baccharis sarothroides</i> * 🌻
Fern-leaf Lavender	<i>Lavandula canariensis</i> 🌿
Coneflower	<i>Echinacea spp.</i>
Coreopsis	<i>Coreopsis spp.</i>
Baja Fairy Duster	<i>Calliandra californica</i> 🌻 🌿
Wolfberry	<i>Lycium spp.</i> * 🌿
Yarrow	<i>Achillea millefolium spp.</i>
Shoestring Acacia Tree	<i>Acacia stenophylla</i>

*Native

Queen butterflies feeding on Desert Milkweed, *Asclepias subulata*

Important Note Regarding Pesticides

Many plant nurseries or their growers use systemic or topical pesticides on their plants to prevent insect damage on leaves. Remember that butterflies are insects too, and their caterpillars will not survive if they chew a treated leaf. Always ask your nursery if your plant has been treated with systemic or topical sprays.

When you maintain your butterfly garden, do not use any pesticides or insecticides. Even nearby spraying can drift onto your visiting butterflies' favorite plants. Instead, incorporate a variety of host and nectar plants to help keep pest levels down and allow the populations of natural predators to increase to reduce unwanted pests.
